Experience:

Root Insurance — **Columbus, Ohio**
Engineering — *July 2017 – Present*

Senior Engineering Manager

- Maintained insight and ensured progress of the four engineering teams deliverables that I manage.
- Coached directly and through other leaders the approximatly 30 engineers in my organization.
- Implemented multiple processes that minimized redudent work, ensured critcal issues were addressed, and balanced immediate and long term needs.

Engineering Lead

- Lead the team that implemented our in-house claims system and imported existing claims from and external vendor in a three month window.
- Oversaw the work and reviewed the code of members of my team during the weekly sprint cycles.
- Triaged bugs and maintained systems during the weekly rotations.

Senior Software Developer

- Implemented features across the full stack, from the Rails backend systems through to the React client side application.

SPIDAWeb LLC — **Gahanna, Ohio**
Software Development and Analysis Engineering — *August 2007 – July 2017*

Web Developer

- Designed and programmed multicomponent service-oriented web applications using various frameworks and design patterns.
- Wrapped external web services into common interfaces for modular designs.
- Diagnosed and tuned large datastores for sub-second response times.
- Installed and supported containerized deployments inside corporate and cloud environments.

Desktop Developer

- Involved in all aspects of the development of the company's primary desktop application, including design, development, and testing.
- Wrote a finite element analysis package, that accounted for geometric non-linearities, catenary wires, pre-stressed components, and temperature affects to determine loading and stresses in utility pole structures.

Development Manager

- Managed the team responsible for the development, maintenance and support of the company's software products.
- Served as the primary technical contact for internal design processes and external customer interactions.
- Implemented continuous integration testing, code review, and feature development cycles to support a more robust development process.

Los Alamos National Laboratory — **Los Alamos, New Mexico**
Engineering Institute — *May 2006 – July 2007*

Graduate Research Assistant

- Designed, built, and tested small electronic devices for use in structural health monitoring applications.
- Programmed in MATLAB and C to control external hardware for data acquisition and analysis.
- Developed a sensor diagnostic algorithm for use with piezoelectric sensor/actuators and implemented it in software.

TK Engineering — **Cincinnati, Ohio**
Analysis Engineering — *August 2005 – April 2006*

Engineering Apprentice

- Constructed both two and three dimensional finite element models of aircraft engine parts for modeling heat transfer, stress, and life.
- Automated boundary condition application through the programming of macros in ANSYS.

Los Alamos National Laboratory — **Los Alamos, New Mexico**
Dynamics Summer School — *June 2005 – August 2005*

Engineering Intern

- Worked as part of a multi-disciplinary team to implement an algorithm that used natural frequencies to detect damage in a structure.
- Correlated test results to a theoretical model for plant identification and controller implementation.

Robert Bosch GmbH — **Stuttgart, Germany**
Central Research and Development Center — *April 2001 – September 2001*

Praktikant

- Programmed a climate chamber measurement system using Visual Basic to improve data collection and decrease measurement time by eighty percent.
- Developed a test protocol and programmed measurement systems to qualify new magnetic antilock brake sensors.
- Designed and constructed fixtures for testing existing products within magnetic fields.

Enable Medical — **Cincinnati, Ohio**
Product Engineering — *June 1999 – August 2000*

Manufacturing, Research, and Development Co-op

- Designed and constructed prototype devices for use in treating heart disease that led to a device being taken to market.
- Performed primary testing and qualification before product release for both endoscopic and open surgery devices.

Computer Skills:

Languages	Frameworks	Databases	Build Tools
Bash	EmberJS	MySQL	Ant
C	Grails	MongoDB	Gradle
Groovy	NodeJS	Oracle	Grunt
JavaScript	React	PostgreSQL	Ivy
Java	Ruby on Rails	Redis	Maven
Ruby	Sinatra	SQL Server	Rake

Education:

Other Syntaxes	Testing Frameworks	CI Systems	Deployment Tools
CSS/SCSS	Jasmine	CircleCI	Docker
HTML	JUnit	CodeCov	Google Cloud
JSON	Mokito	Jenkis	Heroku
LaTeX	Spock	Travis CI	httpd
Markdown			Tomcat
XML			NGINX
Design Concepts	**Operating Systems**	**Protocols**	**Version Control**
Agile/Scrum	Linux	REST	Git
IoC	OS X	SOAP	Subversion
MVC	Windows	SSL	
SOA			

University of Cincinnati *Department of Mechanical, Industrial and Nuclear Engineering*
Masters of Science in Mechanical Engineering - 2007

- Structural Dynamics
- Advanced Vibrations
- Finite Element Techniques

University of Cincinnati *Department of Mechanical, Industrial and Nuclear Engineering*
Bachelor of Science in Mechanical Engineering - 2002

- International Engineering Certificate

Open Source:

- *Resume* (author) the code that was used to generate this document
- *Truck Circuit* (author) an arduino project with matching cicuit diagram for a halloween costume
- *SmartThings* (author) device handler to control a whole house fan
- *Dot Files* (author) series of scripts to make configuring a computer quick and consistent
- *SHM Tools* (contributor) a package of engineering tools used in structural health monitoring
